How to filter your row data

This document briefly explains how to use the data filter syntax.

Column names

If a column name contains any of these special characters `~ () # \ / = > < + - * % & | ^ ' „ []`, you must enclose the column name within square brackets `[]`. If a column name contains right bracket `]` or backslash `\`, escape it with backslash (`\]` or `\\`).

```
1. "id = 10";           // no special character in column name "id"
2. "$id = 10";          // no special character in column name "$id"
3. "[#id] = 10";        // special character "#" in column name "#id"
4. "[[id\\]] = 10";     // special characters in column name "[id]"
```

Literals

String values are enclosed within single quotes `' '`. If the string contains single quote `'`, the quote must be doubled.
